DETAILED ACTION

Claim Rejections - 35 U.S.C. § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claim 2 is rejected under 35 U.S.C. 102(e) as being anticipated by Hirose(5,740,468).

With regards to claim 2, Hirose teaches a switching system comprising:

a switch section(Fig. 1B@93) having a plurality of input lines and a plurality of output lines to perform line switching between the input lines and output lines(Fig. 1B);

a plurality of first serial transmission paths connected to input lines(Fig. 1B, transmission paths from sources are connected to input lines via input buffers), respectively; input buffers connected to input-side communication devices and terminals of the first serial transmission

paths, respectively, to equalize transmission signal from said input-side communication devices and send the signals to the first serial transmission paths;(Fig. 1B@921-92n)

a plurality of second serial transmission paths connected to output lines(Fig. 1B, transmission paths leading to destinations are connected to output lines via output buffers), respectively;

output buffers connected to output-side communication devices and terminals of the second serial transmission paths, respectively, to equalize transmission signals from the second serial transmission paths and send the signals to said output-side communication devices.(Fig. 1B@941-94n); and a receiving section inserted between the first transmission paths and the input lines to receive the transmission signals from the first serial transmission paths and supply the signals to the input lines(Fig. 6B@111-114)

Allowable Subject Matter

3. Claims 6-7, 9-20 are allowed.
4. Claims 3-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
